Summary

Full Stack AI Developer specializing in AI-powered web applications using Python, FastAPI, React, LangChain, and modern LLM technologies. Focused on building scalable, production-ready software with expertise in RAG systems, backend architecture, and cloud deployment.

Education

IIT Madras — Online
Bachelor of Science in Data Science, Minor in Programming — *May 2023 – May 2027*

Guru Nanak Dev University — Amritsar, Punjab
Bachelors of Technology in Electronics and Computer Engineering — *July 2023 – July 2027*

Experience

Backend Web Dev Intern — June 2025 – Aug. 2025
Nobel Navigators, Washington Blvd — *Remote*

- Conducted web development sessions for 10+ peers, teaching Python and Flask backend workflows.
- Collaborated on 3+ team projects, contributing to backend development and debugging.
- Delivered 5+ sessions on backend logic, UI structuring, conversational AI, and prompt engineering.

Projects

ResolveAI Platform | *Python, FastAPI, LangChain, Groq API, FAISS, SQLite* — Live Demo

- Built and deployed a multi-user AI support platform on Render using FastAPI, Groq Llama 3.3, and SQLite with secure authentication, persistent chat history, and analytics dashboard.
- Developed a PDF-based RAG pipeline using FastEmbed and FAISS, enabling source-aware document question answering with low-latency retrieval.
- Optimized memory usage by replacing PyTorch with FastEmbed, reducing deployment footprint to fit Render's 512 MB limit while maintaining sub-3s response time.

AI Scam Detection System | *Python, Flask, SQLite, Google OAuth* — Live Demo

- Developed a rule-based scam detection engine with 25+ heuristic checks, achieving 85% detection accuracy across text and URL-based scams.
- Implemented secure authentication with Google OAuth, OTP-based recovery, password hashing, and session management for protected user access.
- Designed a SQLite-backed history module to maintain personalized scam analysis records and user activity tracking.
- Built a risk-scoring dashboard with AI-generated explanations and deployed the application on Render using secure environment-based configuration.

Quiz-Master Web Application | *Python, Flask, SQLite, Jinja2* — Live Demo

- Selected through a two-stage IIT Madras academic evaluation, recognizing the application's technical quality and end-to-end implementation.
- Built a role-based quiz platform with admin and user dashboards, supporting full CRUD operations across subjects, chapters, questions, and quizzes.
- Engineered timed assessments with automated scoring, per-user attempt history, and a normalized 6-table SQLite database.

Technical Skills

Languages: Python, JavaScript, TypeScript, HTML5, CSS3
Frameworks & Libraries: FastAPI, Flask, React, LangChain, LangGraph, Jinja2, SQLAlchemy
Databases & AI Tools: PostgreSQL, SQLite, Redis, ChromaDB, FAISS, FastEmbed, Hugging Face, Groq API, Google Gemini API
Tools & Concepts: Git, GitHub, Docker, Kubernetes, Render, REST APIs, WebSockets, RAG Systems, Authentication, Vector Embeddings, JWT, OAuth, CI/CD
